- ▶ 100% Waterproof Design will not Absorb Moisture
- ▶ Increased LED Performance
- ▶ Consistent Color Throughout and from Light to Light
- ▶ New Chromium Plating Technology to Prevent Peeling
- ▶ 43% increase in Lumen Output
- ▶ Easy Retrofit

Question: When you see a new limousine traveling down the road, whose opera light do you see?

Answer: CoachLyte, designed by Lumenyte International Corporation. Over 90% of all limousines manufactured today are equipped with the LIC CoachLyte.

CoachLyte IV, the market's only patented LED/acrylic rod opera light combination, adds a touch of class to your ride. Its crystal face gives a beautiful daytime appearance, while eliminating the "spotty" look common to other LED opera lights.

In addition to its beauty, this rugged and durable light offers improved LED performance, featuring new DR-LED Super Bright technology. The result is a 43% increase in lumen output and tighter color rendering with consistent color throughout its length and from light to light. Also, the new optic design is 100% waterproof and will not absorb moisture.

The CoachLyte IV also offers a superior finish to previous models - a new chromium plating technology which prevents peeling. A convenient hole pattern and gasket design makes it ready for immediate retrofit, easily replacing virtually any other opera light on the market. Best of all, CoachLyte IV is available directly to you, from the market's leading manufacturer, Lumenyte International Corporation.

When it comes to coach lighting, nobody does it better, or brighter, than Lumenyte. For more information, call our Limousine Customer Care Specialist at **949.829.5220** or send email to ewiggins@lumenyte.com
